

ABSTRACT OF THE DISCLOSURE

A front structure of a vehicle includes a suspension cross member provided between left and right front side frames; wheel aprons, each provided between an upper side frame and the front side frame; and strut towers connected to the upper side frames, front side frames and wheel aprons. A pair of strut tower reinforcing members form vertically extending structures with closed hollow cross sections in cooperation with the strut towers. The structures with the closed cross hollow cross sections are arranged to correspond to ends of the suspension cross member with respect to a longitudinal direction of the vehicle.
